Classic 2.5 - the original

The Classic series encompasses flexible tin plated, multi-strand, oxygen-free 5N purity copper! In addition to the corrosion resistance, the tin plating contributes also to a much wanted skin-effect reduction and prevents the electrons (i.e. the current) from disruptive "jumps" between the strand surfaces, hence adding unwanted timing errors to the music signal. The insulation of a select grade chemically stable PVC further improving the sonically benign tin surface over time. The Classic series is according to today's measures good entry level cables and are available in dimensions suitable for a wide range of power transmission demands. Compared to any low cost hifi-kits included speaker cables, Supra Classic will give a clearly audible improvement.

Typical applications: Mid-powered systems, short-length high-powered setups, or both treble and bass wiring in bi-wired or bi-amplified Hi-Fi systems. For outdoor use, installation in conduit pipes is recommended.
