Customs tariff no: 8544429010

Country of origin: Sweden

- Excellent price/performance ratio!
- Ultra slim design
- Robust 24K gold plated plugs
- Ideal for mobile applications

MP-cable 1MP-1MP Audio - slim

Today's mobile devices such as smartphones, tablet computers, and similar equipment typically feature a 3.5 mm analogue headphone output. These devices can also be connected to other audio systems, such as in-car sound systems or computer speakers.

An increasingly common setup consists of a simple hi-fi system with a pair of active stereo speakers, a headphone set, and online music services combined with a local music library on a NAS server—all accessible via mobile or computer devices.

We have developed two cable types covering most mobile audio applications. Their flexible design and robust, moulded, gold-plated connectors make them ideal for mobile use. Available in the most common lengths.

Supra MP – MP

3.5 mm stereo mini-jack to 3.5 mm stereo mini-jack. Gold-plated and fully shielded, making it ideal for connecting a mobile device to, for example, an analogue in-car audio system or directly to an active computer speaker setup.

CONSTRUCTION
