Trico 1MP-1RCA digital - Digital Interconnect SDI & S/PDIF 75 Ohm

The SUPRA Trico true 75 Ohm digital interconnect cables are designed for a wide range of digital and video transmission applications requiring a closely matched characteristic impedance and exceptional bandwidth, such as between computer and DAC, or in professional video signal chains.

Trico cables provide the necessary high bandwidth to transmit the full digital spectrum with well-controlled signal integrity. They maintain sufficient headroom to ensure maximum performance even over longer cable runs and feature extremely low capacitance, the most favourable characteristic for the transmission of digital square waves.

The SUPRA Trico MP/RCA is a single-ended interconnect suitable for applications such as SDI, CD transport to DAC, or connection to AV amplifiers.
